Cost Data

Scenario Description:

Development of a 138 Conservation Plan Supporting Organic Transition Conservation Activity Plan CAP.

Natural Resource Concern:	Soil Erosion, Water Quality, Plant Condition, and other identified natural resource concerns.
Resource Setting:	Agricultural operation where producer will transition from conventional to organic to meet USDA National Organic Program (NOP) requirements.
Before Practice Situation:	Agricultural operation currently managed using traditional and conventional methods for farming and/or ranching. The producer currently manages operation based upon personal knowledge, or other local criteria. Producer is interested in transitioning part or all of the management unit to meet national USDA requirements for certified operation. Producer is willing to collaborate with a certified TSP to develop a plan and collect/coordinate data recording to monitor per requirements of plan.
After Practice Situation:	After EQIP contract approval, participant has obtained services from a certified TSP for develop of the "Conservation Plan Supporting Organic Transition" conservation activity plan. The CAP criteria requires the plan to meet quality criteria for applicable resource concerns and provides for opportunities to implement a system of conservation practices which assist the producer to transition from conventional farming or ranching to an organic production system. The CAP plan may include recommendations for associated conservation practices which address related resource concerns. CAP meets the basic quality criteria for the 138 plan as cited in the NRCS Field Office Technical Guide as well as assist the grower develop an Organic System Plan (OSP) as defined in the USDA National Organic Program (NOP) standards.
Associated Practices:	Refer to the NRCS Plan Criteria for conservation practices associated with operations transitioning to organic certification and typically needed to address identified natural resource concerns.
